Projects

PROJECT ESTIMATION MANAGER – PYTHON (Sep 2025 – April 2026)

The objective of this project is to develop a machine learning-based system that predicts software project cost and completion time. I used regression-based machine learning algorithms to improve prediction accuracy. One important feature of the system is the negotiation mechanism, which dynamically adjusts estimates based on project constraints like budget, resources, and deadlines.

BANK CUSTOMER CHURN PREDICTION –PYTHON (Nov 2025 – Jan 2026)

A predictive analytics project focused on identifying customers likely to leave a bank. It uses machine learning models to analyze customer behavior and risk factors. Key features include data preprocessing, feature engineering, and model training. The system predicts churn probability to help banks take proactive action.
