SUMMARY

Machine Learning and Deep Learning enthusiast strong Mathematical intuition with hands-on experience in Python-based model development, data preprocessing, and performance evaluation. Motivated to learn, experiment, and apply AI techniques to real-world challenges.

EDUCATION

B. Tech Artificial Intelligence and Data Science	2023 – 2027
Sri Shakthi Institute of Engineering and Technology, Coimbatore	CGPA: 8.72/10 *
Government Model Higher Secondary School, Virudhunagar	90%
	2021 – 2023

PROJECTS

DocuVision AI: **Nov 2025 - Present**

Python, PyMuPDF & PIL + pytesseract, LangChain, sentencetransformers ChromaDB / FAISS, MongoDB, matplotlib Plotly, Streamlit / Gradio, machine learning

Developed a multimodal PDF intelligence system using LLMs, vector search, NoSQL storage, and image/table extraction to provide multilingual, source-attributed answers and automatic chart generation.

Churn Prediction: **Dec 2024 – Jan 2025**

Built a machine learning model to predict customer churn using classification techniques. Preprocessed data, handled class imbalance with SMOTE, and trained an XG Boost model achieving high accuracy. Evaluated performance using standard classification metrics to support customer retention decisions.

Movie Genre Classifier (NLP): **Mar 2025 – Apr 2025**

Developed a machine learning model to classify movie genres based on plot summaries and textual features. Performed text preprocessing including tokenization, stop-word removal, and TF-IDF vectorization. Trained and evaluated classification models such as Naive Bayes and Logistic Regression to predict genres accurately. The project demonstrates practical application of Natural Language Processing (NLP) techniques for text classification.

Handwritten Digit Recognition **July 2025 – Aug 2025**

Python, NumPy, Pandas, Scikit-learn / TensorFlow / Keras, MNIST Dataset, Matplotlib Developed a machine learning model to recognize handwritten digits using the MNIST dataset. Performed data preprocessing, normalization, and feature extraction to improve model performance. Trained and evaluated classification models including neural networks to accurately identify digits from 0 to 9. Visualized predictions and model performance to validate accuracy and reliability.

TECHNICAL SKILLS

Languages: Python, SQL

Technologies/Frameworks: Matplotlib, Seaborn, OpenCV, Pandas, NumPy, Streamlit, Gradio, LangChain, Langgraph

Tools: FAISS, ChromaDB, pdfplumber, PyPDF2, PyMuPDF, Gemini AI, Google colab, Jupyter Notebook

Others: Vector Databases, Embeddings, Prompt Engineering, Data Cleaning & Processing, Deep learning, Transformers.
